OUR METHODOLOGY

Our technique seeks to deliver the proper product through incremental and regular delivery of small pieces of functionality via small cross-functional self-organizing teams, allowing for frequent customer input and course correction as needed. Continuous evaluation of requirements, plans, and results provides our agile teams with a natural mechanism for responding to change quickly.

HOW OUR DEVELOPMENT PROCESS WORK

ACube internally follows the AGILE methodology for all their projects. However, we do support and successfully integrate with our client projects running in Agile, Waterfall, Iterative, or Hybrid Methodologies, Rapid Application Development Methodologies, and DevOps Methodologies.

TECHNICAL COMPETENCY

With the utmost respect for human values, we promise to serve our customers with integrity through innovative, value-for-money solutions and by using original thought on a daily basis.

OUR GLOBAL CLIENTS

We promise to serve our customers with integrity through innovative, value-for-money solutions and by applying new thought every day, with the utmost regard for human values.

TESTIMONIAL

David Smith, CEO Tynax, Inc

I have been very impressed by ACube's work and would highly recommend them. They quickly performs the work, solves all technical issues in the process, delivers finished results and then checks back to ensure that all is working OK. they are pleasure to work with and I plan to use ACube for several projects in future.

Paul Wagner, CEO CreativeLab

ACube Technologies is a sharp, dedicated group of guys who will do whatever it takes to complete a job and fulfill a commitment. They ask the right questions, communicate throughout the process and they deliver high quality work on time and on budget. I recommend ACube for your next project. Hire them, they're great to work with.

**Randy Boldyga, CEO/President
RxNT**

Acube provided excellent service and demonstrated strong technical capability. I would recommend.

**Guy Simani, President, Emerald
Capital Management**

The ACube team are reliable, responsive and diligent.

Mark L Fox, Vice President SAAF, LLC

I have been working with Acube Technologies for 2 years now. My plan was for them to help me with a few tasks, but today they simply are my entire IT staff. They are technically capable and are extremely fair as far as costs. I work with them 7 days a week and my business would not exist without them....they have helped me grow my business 300%.

**Chuck East, Technical Product Manager,
Openn North America**

I wanted to email you my sentiments expressed at the end of our side so you can share my appreciation with your teams. Thank you for everyone's willingness to pull together around the shifting priorities coming into engineering. The hard work, extra hours, and deep product knowledge are examples of how the teams go the extra mile. I have been managing offshore teams for many years, and the Openn engineering team is by far the brightest and most dedicated. Thank you for your continued efforts.

OUR TEAM

ANAND C
CEO / FOUNDER

Anand, the visionary founder and managing director of ACube, has steered the company to impressive growth over the past decade. With extensive experience in the IT industry, including key roles at Tech Mahindra and Sony India, Anand brings a blend of sharp intellect and gentle leadership.

He holds a B.E. in computer science from MS University Tirunelveli and an M.B.A. in International Business from Annamalai University, Tamil Nadu.

Beyond the boardroom, Anand is a disciplined outdoor enthusiast who maintains his health through a rigorous diet and exercise. In his leisure time, he loves diving into photography books and cherishing moments with his kids.

Anand's unique blend of professional expertise and personal passions makes him a dynamic and inspiring leader.

SAHILA R
CFO / DIRECTOR

Sahila R, a director at ACube, expertly oversees all administrative, financial and risk management operations. She ensures the preservation of company assets and the accuracy of financial reporting, while also managing ongoing developments and control systems.

Sahila's meticulous oversight is crucial to ACube's success and stability.

RAJARAM G
CTO

Rajaram, brings 15 years of information technology experience, with the last 7 years focused on the architecture and technology domain.

As a seasoned architect, he excels in enterprise architecture, solution architecture, technical architecture, and infrastructure architecture.

Rajaram has worked across various verticals and geographical locations, including roles as an independent architect for key projects.

An expert in defining IT strategy, enterprise architecture, transformation solutions, and Application/Technology Roadmaps, Rajaram is also a DevOps specialist.

He has a proven track record in administering production systems, automating and optimizing critical deployments, and leveraging configuration management, CI/CD, monitoring, and troubleshooting.

Rajaram's expertise extends to developing end-to-end application solutions in machine learning and NLP, delivering relevant data insights that significantly benefit clients and organizations.

SUCCESS STORIES

Transforming RxNT Healthcare with ACube: A Success Story

RxNT is a top provider of healthcare software, offering electronic health records (EHR), practice management (PM), and electronic prescribing (eRx) systems. They aim to simplify and enhance healthcare processes with innovative, user-friendly software for medical professionals across the U.S.

Before Acube, RxNT relied on legacy .Net applications, which slowed development, increased maintenance costs, and hindered scalability. This outdated infrastructure made it challenging to keep up with healthcare technology advancements.

Today, RxNT is ranked on the **Inc. 5000** list of “Fastest-Growing Private Companies,” thanks to their partnership with Acube. Acube’s innovative approach and technological expertise drove this significant growth.

- Data Migration: Moving vast amounts of data to the new MERN stack without loss or corruption.
- System Compatibility: Ensuring new applications worked with existing third-party systems and devices.
- Performance Optimization: Achieving optimal performance, especially under high user loads.
- Security Concerns: Maintaining stringent healthcare data security standards.
- User Training: Training end-users on the new system while minimizing disruptions.

The transformation modernized RxNT’s technology and unlocked growth potential:

- Increased Revenue: RxNT experienced significant revenue growth, securing their position among top healthcare platforms.
- High Prescription Volume: Over 80 million prescriptions processed, demonstrating the efficiency of their eRx system.
- Financial Processing Power: RxNT now processes an average of \$200 million in claims annually.

FRANK – Revolution in the Food Safety Industry

FRANK (Food Recording Analysis Network Kitchen) is an innovative system designed to ensure food safety temperatures are monitored efficiently in food businesses. The system allows businesses to electronically tag meals during various stages such as cooking, cooling, reheating, and serving. This creates a clear history of each meal, documenting temperatures and times for all processes.

Traditionally, food businesses relied heavily on manual record-keeping, which was time-consuming, prone to errors, and difficult to manage. Acube identified the need for a more streamlined, reliable, and efficient method to monitor food safety temperatures. By developing the FRANK system, they have enabled businesses to transition from paper-based logs to a sophisticated digital solution. This transformation has not only improved compliance with food safety regulations but also enhanced operational efficiency, reduced costs, and provided real-time access to critical data.

Challenges:

1. Integration with Existing Hardware**: Ensuring compatibility with a variety of existing thermometers and devices was a major challenge.
2. User Training and Adoption: Transitioning staff from manual to digital record-keeping required comprehensive training and a user-friendly interface.
3. Data Security and Cloud Storage: Securing sensitive data and ensuring reliable cloud storage was critical to gaining user trust.
4. Regulatory Compliance: The system needed to meet stringent food safety regulations and standards across different regions.

Solutions:

1. Hardware Compatibility: FRANK was designed to work seamlessly with a wide range of existing thermometers and tablets, minimizing the need for new equipment.
2. On-Site Installation and Training: Acube provided on-site installation and training, ensuring that staff were proficient in using the new system from day one.
3. Robust Security Measures: The app includes strong security protocols for data storage and transmission, ensuring information is safely stored in the cloud and accessible as needed.
4. Regular Updates: The system is regularly updated to incorporate new features and ensure compliance with evolving food safety regulations.

Today, FRANK, through the Acube system, has positioned itself as a leader in digital food safety management solutions. The system's ease of use, robust features, and reliable performance have earned it widespread adoption in the food service industry. Businesses using Acube enjoy improved operational efficiency, better compliance with food safety regulations, and enhanced peace of mind knowing their data is securely stored and easily accessible. With continuous updates and a commitment to innovation, FRANK is well-placed to meet the evolving needs of food businesses worldwide.

SVHS – AI Powered Secondary Education Platform – How we helped?

SVHS Founded in 2008, SVHS publishes a catalog of supplemental online courses and powers other schools across the US with its flipped classroom learning management system and its online curriculum of more than 60 video-based, self-paced, teacher-supported courses.

Since 2009, ACube and Silicon Valley High School (SVHS) have been collaborating to leverage technology and innovative teaching methods in online education. ACube specializes in providing technological solutions and has played a significant role in enhancing the educational platforms used by SVHS.

Together, we have developed and implemented advanced AI tools that support personalized learning experiences, including AI tutors, AI writing assistants, and AI-powered academic integrity tools. These innovations have helped SVHS to provide high-quality, affordable, and flexible education to over 46,000 students globally. The integration of AI has allowed SVHS to create a more interactive and supportive learning environment, which caters to the individual needs of students and reduces the administrative burden on educators
